Nov 10, 2025

Vercel detects and supports TanStack Start applications, a full-stack framework powered by TanStack Router for React and Solid.

[Create a new TanStack Start app](#) or add `nitro()` to `vite.config.ts` in your existing application to easily deploy your projects:

vite.config.ts

```
1 import { tanstackStart } from '@tanstack/react-start/plugin/vite'
2 import { defineConfig } from 'vite'
3 import viteReact from '@vitejs/plugin-react'
4 import { nitro } from 'nitro/vite'
5
6 export default defineConfig({
7   plugins: [
8     tanstackStart(),
9     nitro(),
10    viteReact(),
11  ],
12 })
```

TanStack Start apps on Vercel use [Fluid compute](#) with [Active CPU pricing](#) by default. This means your TanStack Start app will automatically scale up and down based on traffic, and you only pay for what you use, not for idle function time.

Visit the [TanStack Start on Vercel documentation](#) to learn more
